PROFESSIONAL SUMMARY

Hybrid technical-analytical profile with experience in **corporate IT Support, applied cybersecurity, data analysis, functional analysis, process automation, QA, and full stack development**. I specialize in **process improvement**, data-driven decision making, reducing response times, and translating business needs into scalable technical solutions. I also have experience in **incident triage, monitoring with Sentinel, detection rules based on MITRE ATT&CK, SOAR playbooks, hardening with Intune, vulnerability analysis with Nessus**, and **log analysis**.

- 95% sustained SLA
- +40% resolution speed
- 35% critical incidents
- 200+ active users
- 80+ devices modernized
- 50+ users trained

SKILLS BY DOMAIN

IT Support & Infrastructure

Active Directory, Office 365, Citrix, Jira, PowerShell

Cybersecurity

Kali Linux, Nmap, Wireshark, OWASP Top 10, Hardening, Vulnerability Assessment

Data & Functional Analysis

operational data analysis, functional documentation, process improvement

Automation

task and workflow automation with Jira and scripts for higher operational efficiency

Full Stack & QA

system design and implementation, Node.js, Express, .NET, React, JWT, layered architecture, business logic, QA and automated testing with Playwright

CERTIFICATIONS

PROFESSIONAL EXPERIENCE

IT Support Analyst

Mar 2025 - Present

Asociacion de Cooperativas Argentinas (ACA) | Rosario

- Delivered L1 support for **200+ users** in a corporate environment while maintaining a **95% SLA**.
- Managed **Active Directory, Office 365**, and ITSM tools to ensure operational continuity.
- Implemented **automation workflows** with Jira/PowerShell, achieving a **40% reduction in resolution time**.
- Performed incident analysis and impact-based prioritization to improve service quality, operational efficiency, and data-driven decision making.
- Participation in **monitoring with Sentinel**, collaborating on detection rules based on **MITRE ATT&CK** and automation with **SOAR playbooks**.
- Work on **hardening devices and users with Intune**, analysis of **vulnerabilities with Nessus**, and log review to detect anomalous behavior and escalate incidents when necessary.

IT Support Specialist

Mar 2024 - Feb 2025

Misdemeanor Court - Municipality of Rosario | Rosario

- Led modernization of **80+ devices** and system updates, reducing incidents by **35%**.
- Executed implementation testing, functional assessment, and technical documentation for process standardization.
- Trained **50+ users** to accelerate adoption and improve team productivity.

EDUCATION

Systems Engineering (4th year)

2020 - Present

National Technological University - Rosario

KEY PROJECTS

Flight Management System (Flagship project)

Stack: Node.js Express MySQL JWT PHP MVC

Flight management system with **REST API in Node.js + Express**, JWT authentication, **role-based access control**, reservation management, promotions, and reports. Includes business rules (72-hour cancellation policy), layered architecture (controllers, models, middlewares), and a second implementation in PHP using MVC.

Role-based security Business rules Layered architecture

Functional alignment

AlojARG - Booking Platform

Stack: .NET 9 Angular MySQL JWT

Full stack solution with Clean Architecture, secure authentication, and business logic for accommodation management with advanced search.

BookCode - Book Management & Reviews

Stack: React TypeScript Vite TailwindCSS Framer Motion Node.js Express JWT MySQL MikroORM Redis Google Books API OpenLibrary API

Web platform to discover, manage, and review books. Includes JWT authentication, advanced book catalog search, moderated reviews, user profiles, personalized lists, intelligent recommendations, and integration with external APIs like Google Books and OpenLibrary.

Frontend: React, TypeScript, Vite, TailwindCSS, Framer Motion

Backend: Node.js, Express, JWT Database: MySQL, MikroORM

Cache and integrations: Redis, Google Books API, OpenLibrary API

Full stack architecture Security and validations REST APIs

UX/UI and performance

FISICA-MODELO - Interactive simulations

Stack: JavaScript p5.js Chart.js Node.js

Real-time educational simulations with data visualization to explain aerodynamics and applied physics principles.

Stock Management

Stack: React TailwindCSS Node.js Express Prisma MySQL

Full stack prototype for inventory control with CRUD operations, dynamic filtering, and real-time stock tracking.
